GLOBAL MOBILITY EXECUTIVE × CBIQ

GME LIVE APAC · SINGAPORE · AUGUST 27, 2026

The Room and the Market

What GME Live APAC Global Mobility leaders told the CBIQ benchmark

Event briefing · Global Mobility Executive × CBIQ

ABOUT THIS BRIEFING

Evidence before the room, not impressions

Every attendee at the GME Live APAC event contributed to the CBIQ benchmark, the independent live dataset built from more than 900 Global Mobility, HR and talent leaders worldwide. This briefing analyzes what the Singapore leaders collectively reported and sets it against the wider market, so the day's conversations start from evidence rather than impressions.

All figures state their base. No individual organization is identified, and responses from vendor-side colleagues in the room are excluded, so the picture reflects corporate programs only.

How to read the charts

- Teal is this room, the 65 corporate leaders registered for Singapore.
- Slate is the wider CBIQ benchmark, 900+ leaders worldwide.

65

corporate Global Mobility leaders in this analysis

900+

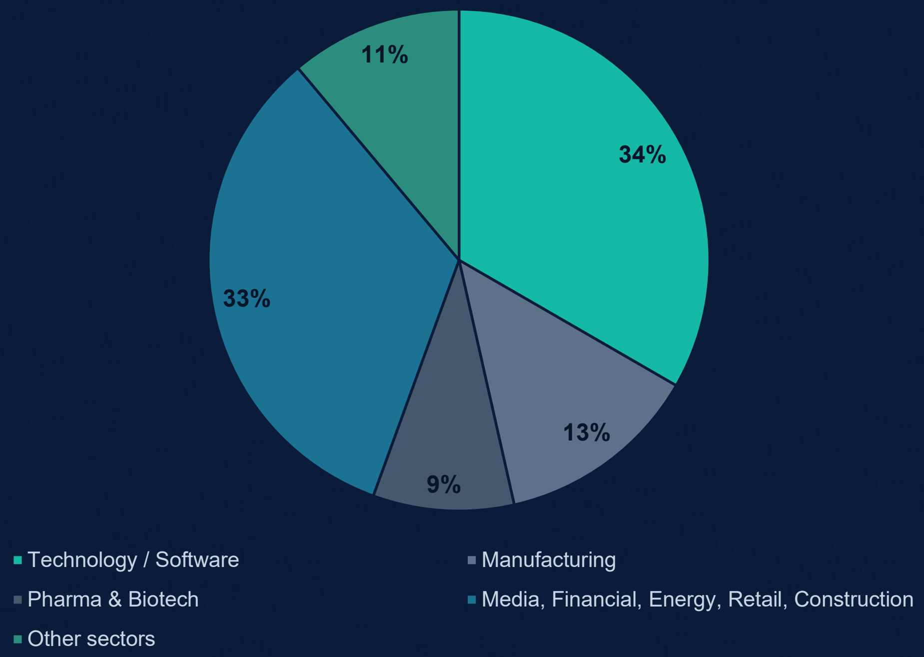
leaders in the wider CBIQ live benchmark

Every figure states its base

No individual organization is identified.

An enterprise-weighted, regionally-managed cohort

Industry of respondents · Base 65

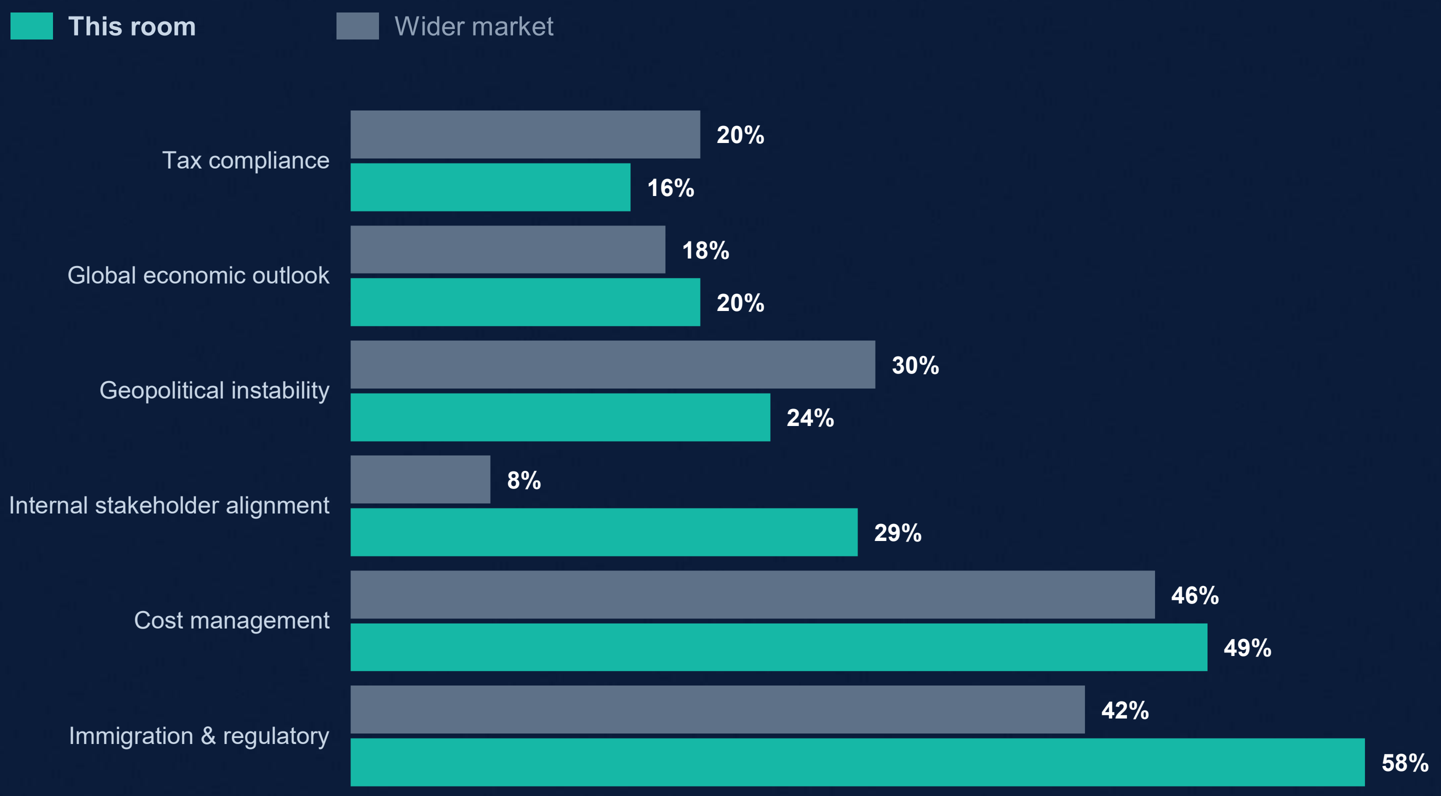


Scale and geography

42%	work for organizations of 50,000+ employees
71%	for organizations above 10,000 (vs ~six in ten across the benchmark)
38 / 31 / 31	HQ split across Asia-Pacific / North America / Europe

A room of regional leaders answering to global centers, which shapes everything that follows. Technology's share mirrors the wider survey, where it is also the largest sector.

Immigration reclaims the top spot



Greatest operational pressures, up to three selections. Base 45. Market comparison is the CBIQ Asia-Pacific cut.

CBIQ

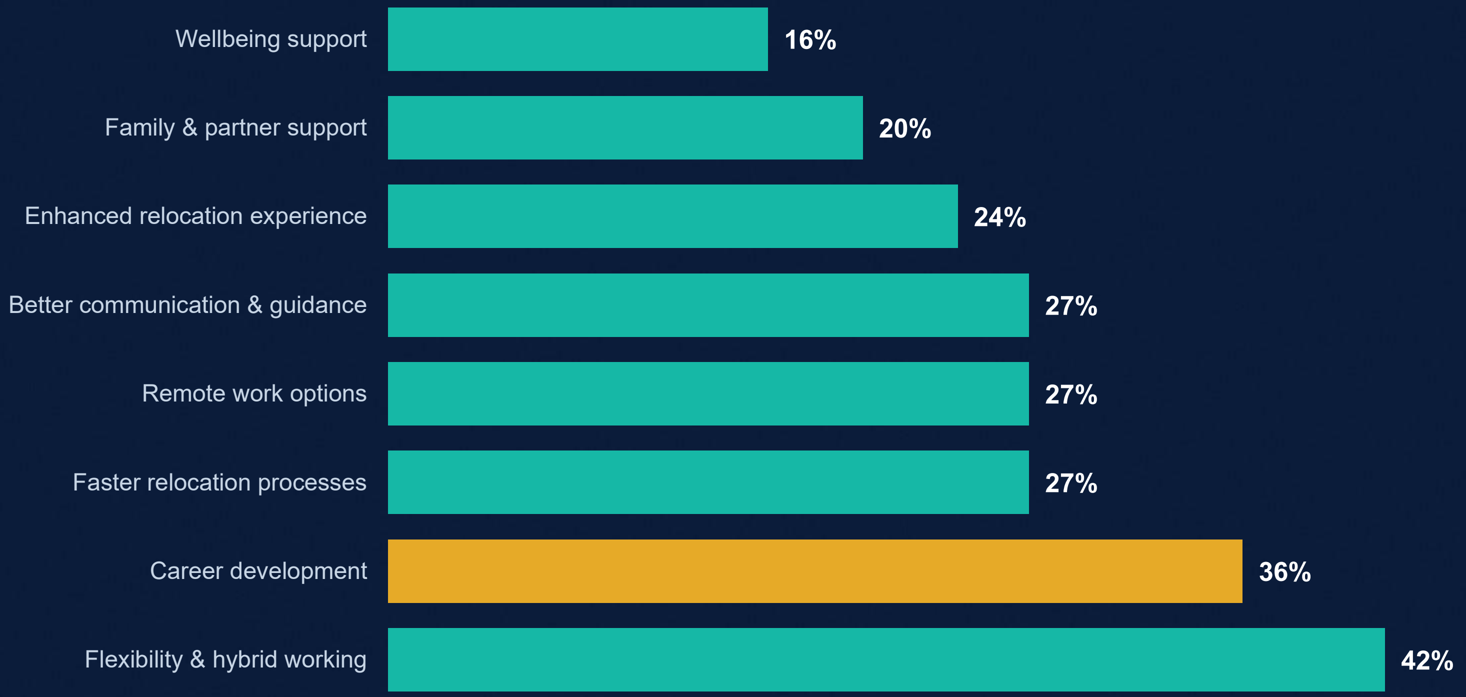
How this compares with the wider market

Across the CBIQ benchmark, immigration, cost and geopolitical instability form the leading pressure cluster. In the Asia-Pacific cut, cost management leads. This room reverses that regional ordering and presses harder on immigration than the market does.

Internal stakeholder alignment at 29% barely registers in the wider benchmark, the price of running regional programs answerable to distant headquarters.

The career-development signature

Rising employee expectations · Base 65 · up to three selections



CBIQ

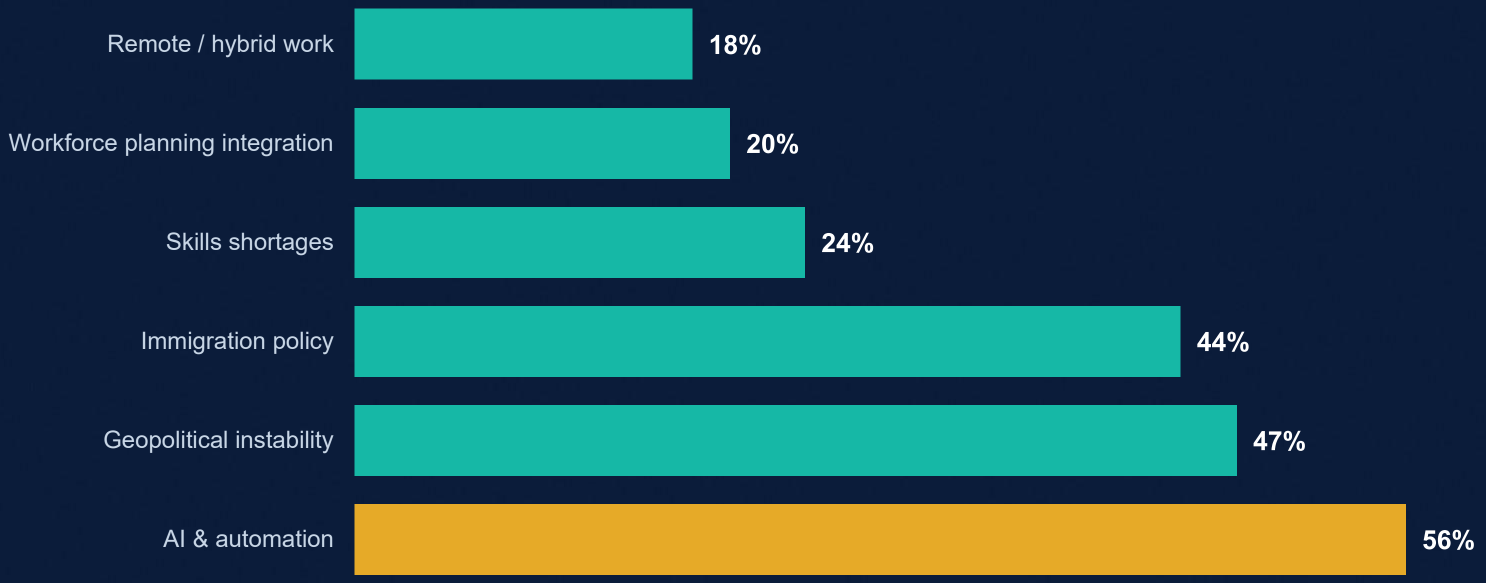
How this compares with the wider market

Globally, flexibility leads and career development sits in the long tail of expectations. In the benchmark's Asia-Pacific responses, career development, personalization and faster processes all feature two to five times more prominently than in the global picture.

Expectations here are not just rising. They are broadening, into career value and speed.

AI takes the top seat

Forces expected to most reshape Global Mobility over three years · Base 65



When the benchmark's Bangalore cohort answered the same question two weeks ago, geopolitics dominated. Singapore's room, weighted toward technology employers and enterprise scale, sees the transformation story first and the instability story second.

CBIQ

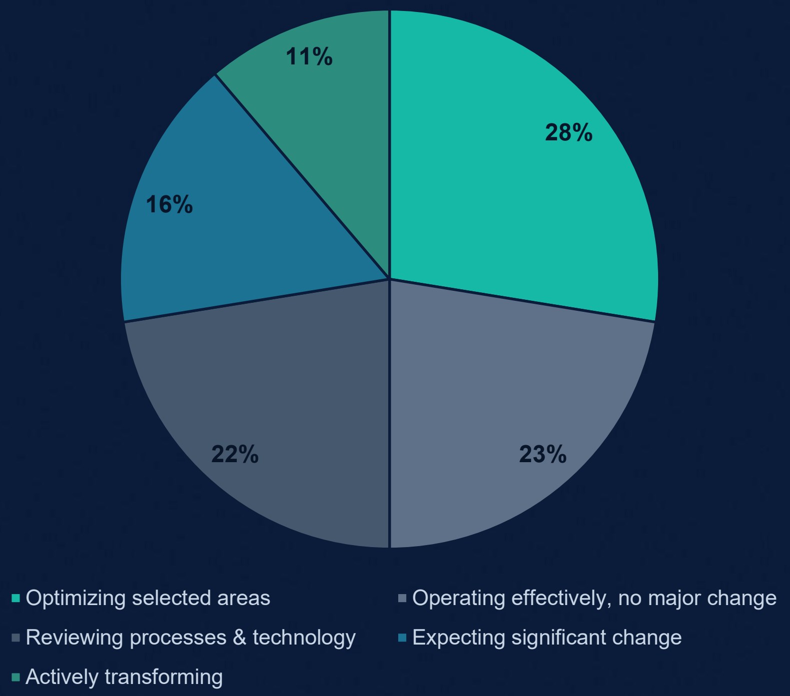
How this compares with the wider market

Investment intentions line up behind the same story: process automation (47%) and AI-enabled workflows (44%) top the room's 12-18 month investment focus, with mobility technology third at 36%.

Where the room expects disruption, it is also directing budget.

Adjusting, not finished

How the room describes its mobility model · Base 65



Only 22% describe their model as operating effectively with no major change underway. The rest are moving.

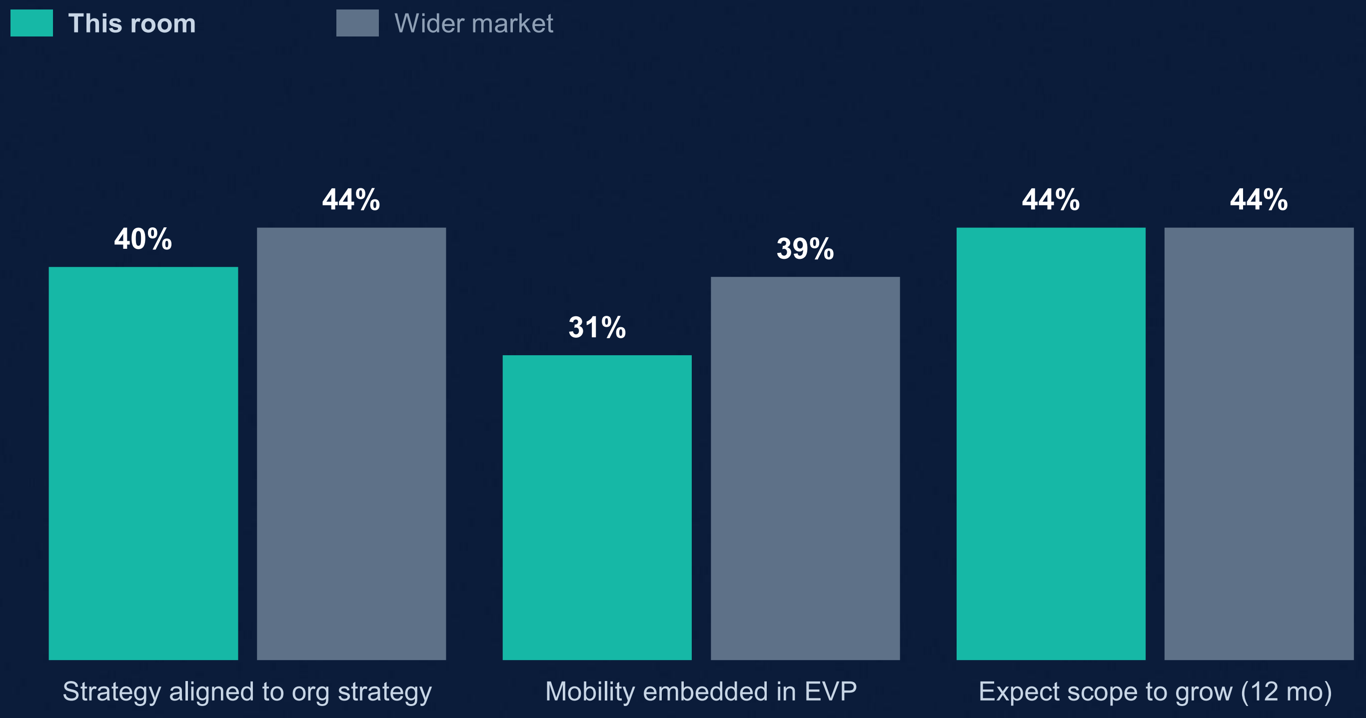
CBIQ

How this compares with the wider market

The wider benchmark tells the same transition story: 28% optimising selected areas, 26% reviewing processes and technology, 24% operating effectively and 22% actively transforming.

Most programs everywhere are adjusting. Few consider the job finished.

Confident on direction, honest about maturity



Share agreeing strongly (6-7 on a 0-7 scale). Base 65.

CBIQ

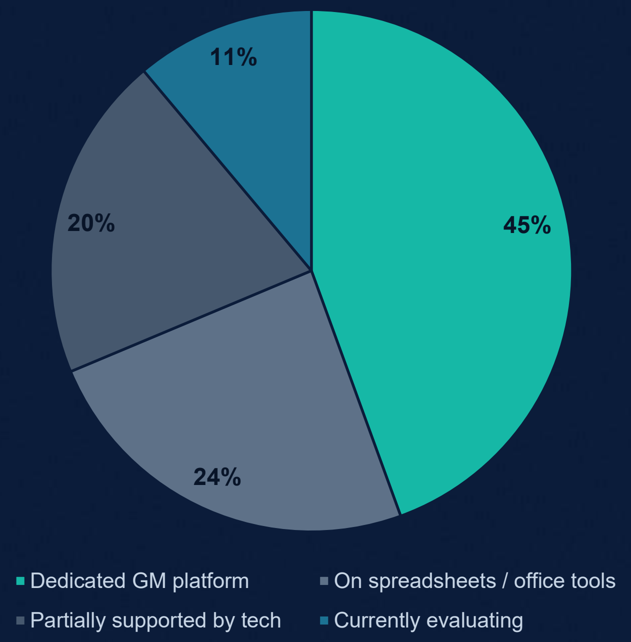
How this compares with the wider market

The room is close to the benchmark on strategic alignment (40% vs 44%) but trails on embedding mobility into the employee value proposition (31% vs 39%), the same ambition-versus-EVP gap the wider market shows, slightly wider here.

Structurally this is a centralized room: 86% run centralized models against the survey's 75%, and 62% operate as a centre of excellence.

High adoption, low visibility

Technology adoption in the room · Base 65



A more technology-engaged picture than the wider survey's 55% adoption. 44% run a dedicated Global Mobility platform.

CBIQ

How this compares with the wider market

Visibility is the weak flank. Among the 149 leaders answering the spend question, 55% cannot state their organization's annual spend on Global Mobility technology, above even the benchmark's roughly half.

The budget conversation is less formed than adoption suggests, and every business case in this room starts from that gap.

Never pitched, not rejected

76%

of non-investing programs have never proposed the funding internally. Not pitched and rejected. Never pitched.

Base 117 non-investing leaders.

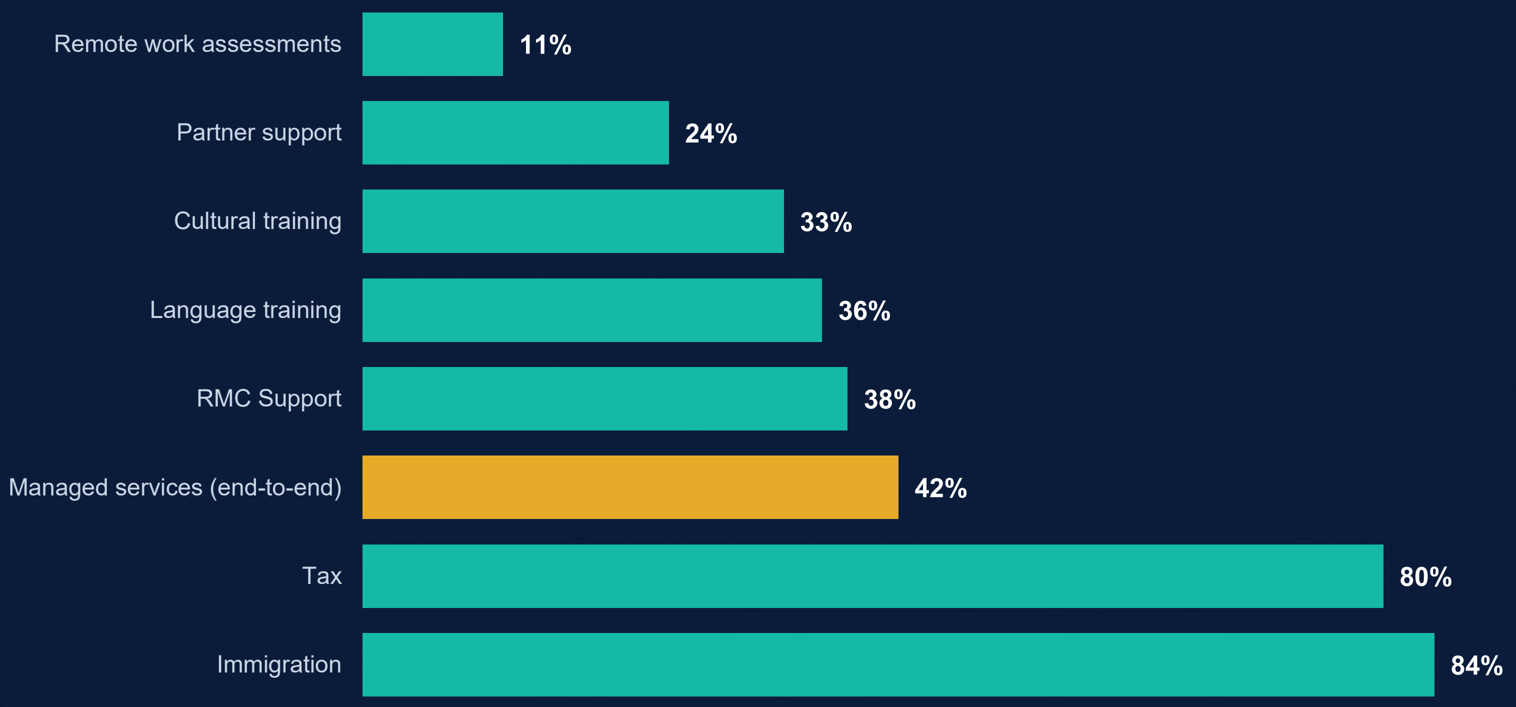
What would build the case

The stated barriers are economic, not product objections: programs perceived as too small to justify (35%) and system cost (29%). The case that would unlock this room's unspent budgets is not a better demo. It is better evidence, exactly what a live benchmark exists to provide.

Buyer mechanics: 61% of investments were approved by the CHRO or HR Director; the Head of Global Mobility approved only a quarter. Compliance and risk reduction is the leading deciding factor (34%), ahead of cost savings (24%).

Compliance bedrock, orchestration rising

Tasks currently outsourced to vendor partners · Base 65



CBIQ

How this compares with the wider market

Immigration (84%) and tax (80%) are near-universal, the same bedrock the wider benchmark shows.

The distinctive figure is managed end-to-end services at 42%: four in ten of these programs hand a vendor the keys to coordinate the full assignment, a materially higher appetite for orchestration than the wider market. Capacity is being bought, not just expertise.

Deployment at industrial scale

29%

manage more than 500 long-term assignments and permanent transfers a year

27%

manage more than 1,000 short-term assignments and business travelers

16%

manage more than 10,000 short-term movements and business travelers

The volumes behind these programs explain the governance appetite. This is a room where deployment is industrial in scale, and where the benchmark's wider findings on traveler tracking and governance land with force.

Three threads run through this cohort

1

Immigration + AI, together at the top

The room expects the rules to keep tightening and expects automation to be the answer to absorbing that complexity without headcount.

2

Expectations are broadening

Beyond flexibility into career value and speed, a program design question, not a policy tweak.

3

A technology paradox it can act on today

Adoption is high, but visibility of spend is low and most non-buyers have never asked. The evidence they say would change that, cost benchmarks and peer data, is exactly what a live benchmark provides.

The benchmark keeps growing

with every event and every survey contribution.

Every leader in the room contributed to the picture in this briefing. The full dataset behind these findings, segmentable by industry, region, company size and assignment volumes, is live now.

Methodology: figures derive from the registration questionnaire completed by attendees of GME Live APAC, Singapore, August 2026. Corporate respondents only (base 45); vendor-side registrations excluded. Multi-select questions report the share of leaders selecting each option. Wider-market comparisons draw on the CBIQ benchmark of 900+ Global Mobility leaders and the 2026 Global Workforce Deployment Survey. Every figure states its base.
